

Genesis360

# Clean Air Starts Inside Your HVAC System

Your air conditioner does more than cool your home. It moves air through the spaces where your family lives, sleeps, works, and breathes every day.

**Genesis360™** for HVAC helps keep the inside of your HVAC system cleaner by targeting the mechanical areas where biofilm, bacteria, mold, and odors can begin.

Most odors start in the HVAC. Many homes use candles, sprays, plug-ins, and deodorizers to mask odors, but if the odor originates within the HVAC system, masking it does not solve the problem.

## One System to Reach the HVAC pathway

Most indoor air quality devices only treat one area of the HVAC system. **Genesis360™** uses advanced dry-droplet misting technology to support treatment throughout the HVAC mechanical area and the downstream air pathway.

## Why homeowners should ask for **Genesis360™**

- ✓ Supports cleaner HVAC pathways
- ✓ Helps reduce order-causing buildup
- ✓ Helps target hidden wet mechanical areas
- ✓ Supports long term HVAC cleanliness and comfort

**A Cleaner HVAC System. Fresher Air. Better peace of Mind.**

Results depend on application methods, the condition of the system, maintenance practice, and professional installation.

# What Could Be Hiding Inside Your HVAC System?

Inside your HVAC system, air from your home is drawn into the air conditioner, cycles across the evaporator coil (in a wet environment), through the mechanical cabinet, into the ductwork, and out through the vents, on the ceiling, floors, or walls in every room of your home. Because the coil and drain pan naturally collect moisture, these areas may collect biofilm, bacteria, mold, mildew, dust, and odor-causing buildup over time. When your HVAC system turns on, the recycled air moves across those same areas and repeatedly circulates throughout your home.

## HOMEOWNERS SHOULD BE AWARE OF

- 1 Indoor air quality concerns for sensitive individuals and those with a compromised immune system.
- 2 Clogged drain pans or drain lines that overflow or back up cause damage to your home.
- 3 Restricted airflow from dirty coils and buildup cause increased operating costs.
- 4 Musty or stale odors from mold/bacteria build-up.

## HOW IT WORKS

### Installed into the HVAC system

Ideally, after your evaporator coil has been manually cleaned.

### Touches more of the pathway

Once the HVAC system is manually cleaned, Genesis360™ helps prevent future buildup.

### Automated treatment cycle

This system is programmed to run on a schedule of your choosing.

### Dry droplet distribution

moves through the HVAC system without surfaces

### Ongoing annual maintenance

Suggested twice a year observation of Genesis360™, effectively running, and to refill the liquid tank.

Ask your HVAC professional about adding **Genesis360™** to your home as a part of a cleaner indoor air and HVAC maintenance strategy.
